*Definition of qualities

A quality: LCD without dead pixels and any other type of damage to the LCD, touch and backlight, so only the glass is broken.

B quality: Small imperfections to the LCD or backlight. This includes: 1 to 2 dead pixels at most 0.2mm and/or screens with slight signs of age. Light sticking effect.

C quality: LCDs that still work but that have more than 1 or 2 small imperfections. (this also includes light pressure damage)

Note: In the case of Non-OEM, we can only accept screens with original LCDs and flex cables. The backlight, frame and front glass may be aftermarket.
